> **Looking for a work-study apprenticeship (alternance)** alongside a Master's in Software Architecture and Development at Ingetis, Paris. Pattern: **3 weeks in company / 1 week at school**, starting September 2026.

I have spent five years in an international e-commerce SaaS, writing JavaScript and TypeScript and taking on the most technical production incidents, on the React side as well as the Node.js side. I am looking for an apprenticeship where I can take more responsibility for the architecture of high-volume applications.

Professional experience

Since 2021 — **Tier 2 Technical Support Engineer, Full-Stack Developer & QA**
Judge.me Product Reviews, international team, remote
Product reviews app for e-commerce, among the highest rated on the Shopify App Store.

- Resolved **over 10,000 technical tickets**: JavaScript and CSS, REST and GraphQL APIs, third-party integrations, data, technical SEO, conflicts between apps.
- **Promoted to Tier 2 in July 2026** for the most complex incidents: bug reproduction, root cause analysis, SQL and MongoDB data investigation, fix validation with product and engineering.
- Fixes, scripts and customisations in JavaScript, TypeScript, React, Node.js, PHP and Liquid, with advanced Shopify integrations (Admin and Storefront API, metafields, JSON-LD).
- Link between support, product and engineering: bug prioritisation in Jira, regression testing before release, technical documentation in English and French, webinars and demos.

Since 2022 — **Shopify / E-commerce Developer, freelance**
International clients, alongside my full-time role

- Custom Shopify stores: Liquid themes, JavaScript, third-party app and API integrations, structured data, technical SEO, performance work and production bug fixing.

Projects

2026 — **Enterprise AI Assistant** | FastAPI, Next.js, PostgreSQL, ChromaDB, Docker (public source)
Searchable internal knowledge base: document ingestion, local embeddings with Sentence Transformers, ChromaDB semantic search, answers returned with their sources and kept within workspace boundaries, pytest coverage.

2026 — **Atlas, AI assistant for energy data** | RAG, multi-source APIs, Node.js
Platform bringing together consumption, billing and customer records, with an assistant that can query several sources from a single interface (indexing, retrieval, API orchestration).

2026 — **Workout tracking app, in progress** | Next.js, TypeScript, Node.js, PostgreSQL, Docker
Personal training log: exercise library organised by muscle group, session builder, logging of sets, reps and loads, rest timer, history and progression charts with personal records.

2025 — **Reusable headless Shopify foundation** | Hydrogen, React Router 7, Sanity, GraphQL, TypeScript (public source)
Project base for connecting any Shopify store to Sanity: Hydrogen storefront, configured Studio, catalogue (Storefront GraphQL) and editorial content (GROQ) joined by product handle, content previews, all redeployable from one store to the next.

Also: Shopify Technical Studies (React, TypeScript, Framer Motion), Shopify Merchant Copilot (RAG), ticket management platform (React, Express, PostgreSQL), Next.js e-commerce dashboard.

Technical skills

Programming	JavaScript (ES6+), TypeScript, Python, PHP, SQL, HTML5, CSS3, Liquid, Java (academic)
Frontend	React, Next.js, Angular, Tailwind CSS, Vue.js (basics), responsive implementation, performance
Back-end	Node.js, Express, FastAPI, REST and GraphQL APIs, MySQL, PostgreSQL, MongoDB, data modelling
DevOps	Docker, Docker Compose, Git, GitHub and GitLab, CI/CD, Vercel, Jira, pytest, AWS (fundamentals)
AI	RAG, embeddings (Sentence Transformers), ChromaDB, LLM APIs, retrieval and response workflow design
Shopify / QA	Shopify (Admin and Storefront API, Hydrogen, metafields, JSON-LD), technical SEO, QA, root cause analysis
Spoken	Arabic (native), French (bilingual), English (full professional proficiency, daily working language)

Education

2026-2027 — **Master's in Software Architecture and Development, Bac+5**, Ingetis, Paris

2019-2022 — **Master's in Software Engineering and Web Applications**, Faculty of Sciences and Technology, Settat, Morocco
Final project: full-stack carpooling application (Java, Angular, REST API, SQL).

2016-2019 — **Preparatory programme in Mathematics & Physics, then Bachelor in General Engineering**, Yncréa Maroc, Rabat
