> **Looking for a work-study apprenticeship (alternance)** alongside a Master's in Software Architecture and Development at Ingetis, Paris. Pattern: **3 weeks in company / 1 week at school**, starting September 2026.

Five years in an international e-commerce SaaS, writing JavaScript and TypeScript and taking on the most technical production incidents. I am looking for an apprenticeship to go further on application architecture.

Professional experience

Since 2021 — **Tier 2 Technical Support Engineer and Developer**
Judge.me Product Reviews, international team, remote

- Resolved **over 10,000 technical tickets** in five years, peaking at 40 to 50 a week, across Shopify, WooCommerce, BigCommerce, Squarespace, Square and Duda.
- **Promoted to Tier 2 in July 2026**: bug reproduction, root cause analysis, SQL and MongoDB data investigation, fixes validated with product and engineering.
- Development in JavaScript, TypeScript, React, Node.js, PHP and Liquid, with advanced Shopify integrations (Storefront and Admin API, OS 2.0 themes, metafields, JSON-LD).
- Monthly webinars and demos for merchants, agencies and partners (2021-2024), as ambassador for the Morocco team.

Since 2022 — **Shopify and e-commerce developer, freelance**
International clients, alongside my full-time role

- Custom Shopify stores: Liquid themes, JavaScript, API and third-party app integrations, structured data, performance work and production bug fixing.

Projects

2026 — **Atlas, AI assistant for energy data** | FastAPI, Next.js, PostgreSQL, ChromaDB, RAG, Docker
Platform bringing together consumption, billing and customer records, with an assistant querying several sources from one interface: document ingestion, local embeddings, semantic search and sourced answers.

2025 — **Reusable headless Shopify foundation** | Hydrogen, React, Sanity, GraphQL, TypeScript (public source)
Project base for connecting any Shopify store to Sanity: Hydrogen storefront, configured Studio, catalogue and editorial content joined by product handle, redeployable from one store to the next.

2022 — **Carpooling application** | Java, Angular, REST API, SQL (Master's capstone)
Full-stack application built from scratch: user and trip management, matching logic, REST API and data model.

Technical skills

Programming	JavaScript, TypeScript, Python, PHP, SQL, HTML, CSS, Liquid
Frontend	React, Next.js, Angular, Hydrogen, Tailwind CSS
Back-end	Node.js, Express, FastAPI, REST and GraphQL APIs, PostgreSQL, MySQL, MongoDB
Tooling	Docker, Git, CI/CD, Vercel, Jira, pytest, DevTools
AI	RAG, embeddings, ChromaDB, LLM APIs
E-commerce	Shopify (Liquid, OS 2.0, Storefront and Admin API, metafields, JSON-LD), WooCommerce, BigCommerce, technical SEO, QA
Spoken	Arabic (native), French (bilingual), English (full professional proficiency, daily working language)

Education

2026-2027 — **Master's in Software Architecture and Development, Bac+5**, Ingetis, Paris

2019-2022 — **Master's in Software Engineering and Web Applications**, Faculty of Sciences and Technology, Settat, Morocco

2016-2019 — **Preparatory programme, then Bachelor in General Engineering**, Yncréa Maroc, Rabat
